Rätselhaft!

A repo. A scientific publication. Many new research questions.

Lea Berger opens up historical puzzle books with a small team. The chair has been researching the topic for years. In the three-year project, systematic corpus analyses are added: students examine rhyme forms; external researchers compare local language models.

The open TEI corpus is itself a scientific publication on GitHub. Others are supposed to be able to download, understand and evaluate a designated version. Lea is planning the publication from the beginning. After the end of the project it should remain usable even without its personal introduction.

How does our working population turn into a scientific data publication with which others can conduct independent research?

Project time
: Three years

Team
: A WiMi position, chair time and advice

Publication
: TEI corpus in a GitHub project organisation

Use
: Teaching, corpus analysis, rhyme research and model experiments

Scale
: Find, understand, investigate and quote locally

Rolls

Lea Berger · Research assistant

Miriam Vogt · Scientific direction

Jonas Richter · Technical representation at the chair

Tessa King · Research data consulting

Elif Arslan · External linguist
