Work and publication architecture

1. Digitalisate / IIIF · Transkribus
2. Visual transcription and verified export
3. Import Archive and Transformation
4. Secure origin · Check transfer
5. Editionsrepo · TEI and model
6. Common relevant work structure
7. Research repos
8. Base level + own models
9. Frontendrepo
10. Receive released TEI

11. Publisher / Set
12. Delivery level + corrections
13. Technical corrections checked back
14. Archive and further work
15. Releases · Access · Responsibility

▼ Decision paths and data flows as text

Digitalisate and Transkribus lead via a documented export and verified import to the relevant TEI in the Editionsrepo. Alternative export routes converge during import acceptance. Independent research retains the reference to the basic status. Released data feed publishing house and technical frontend; typesetting corrections return checked. For archiving, image operation and further work own responsibilities are agreed.
